REPORTED DENGUE CASES

Dear Residents:

The DVA office received a report from a resident that two (2) of their family members contracted dengue disease last December 2016.

In this regard, may we call on every resident of our Village to help us in preventing the spread of said disease which is transmitted by a bite from mosquitoes infected with dengue virus. These mosquitoes breed and lay eggs in stagnant water.

Let us join hands and take personal responsibility to ensure the cleanliness of our surroundings. Following are some of the effective ways to prevent more dengue cases in our Village:

- Cover water drums and pails at all times,
- Replace water in flower vases every week or as often as possible,
- Clean water containers every week and scrub the sides well,
- Clear gutters of leaves and debris to prevent water-stagnation,
- Dispose old tires, tin cans, jars, bottles, and other items that can collect and hold water.

You may send your comments/suggestions on this matter by email at dasma.association@yahoo.com.

Thank you for your cooperation.

MAMERTO R. RODRIGUEZ
Village Manager
